PROFESSIONAL SUMMARY

AI Engineering graduate with hands-on experience building AI applications, backend systems, APIs, and automation workflows using Python, JavaScript, and cloud technologies. Experienced with RAG pipelines, REST integrations, and AI-driven workflow automation through full-stack and cloud-based projects. Strong analytical, troubleshooting, and rapid prototyping skills.

PROFESSIONAL EXPERIENCE

Private Piano Instructor, *Bradford Academy of Music*

03/2020 – 08/2023

Bradford, ON

- Delivered one-on-one instruction to 40+ students with varying learning styles and skill levels.
- Developed strong communication and problem-solving skills by adapting lessons to individual student needs.
- Managed scheduling, client communication, and long-term student development.
- Built patience and structured troubleshooting approaches when addressing learning challenges.

SKILLS

Languages: Python, JavaScript, TypeScript, SQL, Java, C

Frontend: React, Next.js, Vite, Tailwind CSS

Backend: FastAPI, Flask, Node.js, Express.js, REST APIs, JSON

Databases: MongoDB, SQL

AI/ML: TensorFlow, scikit-learn, NLP, LangChain, FAISS, OpenAI APIs

Cloud Tools: AWS (S3, Rekognition, Translate), Git, Postman

PROJECTS

UrgeEase — AI-Powered Recovery Support Platform

09/2024 – Present

- Frontend Developer | Full-Stack Contributor
- Developed and integrated features for a full-stack AI support platform using Next.js, Flask, MongoDB, and Python
- Designed and integrated REST API workflows for authentication, chat sessions, assessments, and recovery planning systems
- Implemented RAG-based AI services using LangChain and FAISS vector search for contextual response generation
- Built AI-assisted dashboard workflows, session management systems, and assessment-driven user interactions
- Executed API testing, debugging, and system validation using Postman and structured test cases
- Collaborated on scalable modular architecture supporting ML prediction services, crisis detection, and contextual AI systems

AI-Powered Multilingual Product Catalog Generator

11/2024 – Present

- Cloud ML | Backend Contributor
- Developed a cloud-based multilingual product catalog platform using AWS services, REST APIs, and Python
- Integrated Amazon S3, Rekognition, and Translate APIs for automated image processing and multilingual content generation
- Built AI-powered workflow automation pipelines for image uploads, translation processing, and backend service orchestration
- Implemented validation logic and error-handling mechanisms to improve system reliability and input consistency
- Contributed to modular backend architecture and frontend/backend API integration workflows

Amazon Fashion Review Sentiment Analysis

05/2025 – Present

NLP & Machine Learning Project

- Developed and evaluated NLP sentiment analysis pipelines using Python, VADER, SentiWordNet, Logistic Regression, and Naive Bayes models
- Performed preprocessing, tokenization, lemmatization, and large-scale review dataset analysis for sentiment classification
- Analyzed model performance using confusion matrices, classification metrics, and comparative evaluation techniques

EDUCATION

Artificial Intelligence Engineering, Centennial College

09/2023 – 04/2026

Toronto

- Completed April 2026
- GPA: 3.7

LANGUAGES

Romanian

Russian
